

BACKGROUND & OBJECTIVES

Around the world there are many activities ongoing in the Future Internet area including among others, the current limitations of the Internet and evolution perspectives in the next 10 years; new service concepts; new Future Internet architectures; the potential domains of applications and content; policies and regulatory issues on Future Internet; economic models and social impacts of the Future Internet, trends in technology, services, media, entertainment, content, trust and security and visionary topics such as the Internet of things and the Internet of services.

The Latin America Summit on Future Internet aims to introduce and present, from an academic perspective, most of these activities for the identification of the critical aspects, business opportunities and challenges that the region is facing on the design and developing of the Future Internet.

The goal of this summit is to bring together professionals from the governments, universities and industries of the different economic sectors of Latin American and the Caribbean, with a number of international experts and industrial and scientific staff from Europe and other developed countries to jointly examine how to optimize the opportunities and challenges of the this region on Future Internet.

SUMMIT TOPICS

The summit will call upon key international experts from Europe and other developed countries as key note speakers to present regulatory, technical, and social and economics sessions, tutorials and discussion panels on Future Internet. Potential sessions include, but are not limited to:

- **Current limitations of the Internet.** This session aims to describe the current limitations and bottlenecks of the Internet we know in terms of capacity, mobility, security, quality of service, management and control, among other shortcomings.
- **Perspectives on Future Internet.** This session will describe from various perspectives (political, regulatory, technical and socio-economic) the critical aspects, business opportunities and challenges that the Future Internet will bring about.
- **Future Internet Architecture and Smart Infrastructure.** This session will present the design principles and architectural challenges for the adoption of the Future Internet Architecture and how the Future Internet Architecture will meet the emerging challenges of the society in terms of health and transport services, climate change and sustainability, among others.
- **The Internet of Services (IoS) and Internet of Things (IoT).** Visionary topics such as the IoS and IoT are fundamental issues that need to be addressed in this session. Specifically, this

session will present the concepts and strategies begin these topics as well as the key enablers in all aspects of IOT and IOS.

- **Policies and regulation on Future Internet in the developed countries.** This session is intended to present key objectives in terms of innovation, competitiveness, progresses and implementation of the European Digital Agenda and the role that the Future Internet will be called upon to play with it. Digital Agendas of a selected group of developed countries will be presented as well to analyse the different objectives and ambitious targets considered.
- **Economic and social impacts of the Future Internet.** This session aims to present the human side of the Future Internet and how it will shape the social, economic and context awareness of what the Internet will offers, from the users' perspective. Key topics such as privacy, intellectual property, education, the economy of the data and new business model for the Future Internet will be discuss within this session.
- **Future Internet perspectives in Latin America.** This session aims to present the visions about the Future Internet in the region from different perspectives (governments, universities and industries). Key players of the different economic sectors of Latin America will be selected to present their visions.

WHO SHOULD ATTEND?

Policy makers, businessmen, marketing and industrial experts, academics, research strategists, experts from financial institutions and investment funds and, in general, professionals from different economic sectors with interests on the development of the Future Internet in Latin America and the Caribbean.
